"Regional" Ing. Teichner	Electrical material	4,581.19
Schoeller-Bleckmann	Pumps	10,000.00
Mannesmann-Traulz A.G.	Pressure rinsing pumps (Kraftspühlumpen), Winches, mobile rotary drilling equipment	1,765,477.99
	Gas pipe	6,439.24
	3 Diesel motors, (MAN and Deutz)	256,000.00
Richard Klinger	Brake lining	17,365.00
Soviet Military Bank	Reason for payment not stated	43,795.00
Donaue Chemie	Sulfuric acid	141,075.00
Othmar Graf Co., Aichelburg, Vienna XXI	Fire brick	6,639.92
"Canada" Tiefbohrgeräte und Maschinenfabrik G.m.b.H.	Production crosses (and) deep well pumps	131,649.00
Wiener Kabel- und Metallwerke A.G.	Lacquered wire	3,503.25

The first carload of Hydrochloric acid from Germany, which arrived on 8 July 1949 at Dobermannsdorf, is now being held by Austrian customs authorities because it was shipped without the required import permit. A second hydrochloric acid shipment is expected from Germany about 14 July 1949.

#### Allocation of Sulfuric Acid

4. During June 1949, no allocations of sulfuric acid were made to the Lobau, Moosbierbaum, Rumpel-Siebehirten, and "Okeros" refineries, and the Kledering refinery received only a small percentage of its usual allocation. About 1 [redacted] 1949, the SMV Kantgasse office sent large production orders, which are to be completed by the end of September, to the Kledering, "Okeros", Moosbierbaum and Nova refineries. The Shell and Vacuum refineries, which in the past few months have had practically no SMV orders, also received new production orders. [redacted] does not know the size of the quotas established in these orders. [redacted] estimates that production of these refineries will be doubled, because the amount of sulfuric acid scheduled for purchase by the SMV Purchasing Office during the next three months has been raised from an average of 165 tons per month to 300 to 350 tons per month.\*\*\*\* [redacted] assumes that the Korneuberg, Wifo-Lobau, and Lobau refineries have not been assigned new production quotas since they are not included in the new sulfuric acid allocations.

5. Although RYABININ, former SMV General Director, is now in Moscow, [redacted] states that his name is still carried on the Soviet personnel roster of the Schottengasse office. SMV Soviet employees state that RYABININ has received a policy level position in Moscow. Meanwhile, KASURA, Director of the SMV Purchasing Office, has returned to Vienna. [redacted] many SMV employees believed KASURA had been recalled permanently because of his consistent emphasis on an employee's ability rather than his Party membership.

CENTRAL INTELLIGENCE AGENCY

25X1A

- 4 -

6. The Austrian Communist Party has established a central employment office in Vienna to hire personnel for USIA, SMV, and OROP offices and plants. According to source, non-Communists and other unqualified employees are to be replaced by workers selected through this office. The SMV continues to replace long-time employees with recent arrivals from Moscow, and although it is not yet clear what the future SMV organization will be, a number of SMV employees are now endeavoring to find positions within those SMV units which the Soviets are likely to retain after the occupation is withdrawn.\*\*\*\*\*

\*

\*\*

\*\*\*

Comment: This order of hydrochloric acid may have been required to supplement stocks recently used in treatments given to SMV wells at DEA I and Maustrenk.

25X1A

\*\*\*\*

Comment: [redacted] refining orders is interesting in connection with account [redacted] regarding recent changes in the allocation of sulfuric acid to the Korneuberg, "Okeros", Shell, Vacuum, Nova, and Kledering refineries and the current shortage of sulfuric acid, because of a breakdown in the ovens for roasting pyrites at Donau Chemie,

25X1A

\*\*\*\*\*

Comment: This information regarding the establishment of a Communist employment office confirms a previous report to the effect that SMV headquarters in conjunction with the KFOe are making a concerted effort to staff SMV units with reliable and competent Communists: see [redacted]
